Ostad Presents YUNet AIgnite Buildathon 2026 · Individual entry

Scam Gym

Practise against an AI scammer before you meet a real one.

Bangla and English · works offline · built by Shahariar

Scams win on pressure, not on knowledge

The OTP caller

“I am from bKash. Your account closes in 10 minutes.”

The job with a fee

“You are hired. Pay the registration fee today.”

The relative on a new number

“It is me, I lost my phone. Send money now.”

> Posters explain what scams look like. They never let you feel the pressure. Scam Gym does.

Six tools that turn awareness into practice

Arena

16 branching simulations. Each choice is safe, risky or fatal, and a coach explains why.

Live AI

Gemini plays the scammer in an open chat. Every reply you type is graded.

Voice call

A phone-style call you answer by voice or by typing, with captions always on.

Scanner

Paste a message or link. Red flags are highlighted and explained in Bangla and English.

Look-alike links

A letter-by-letter diff against the real address, plus a “which one is real?” drill.

Secret word plan

A private family codeword against AI voice cloning. The word is never stored.

Also: Quick Check, 10-minute pause, safety audit, SOS guide, family shield, certificate, XP and badges

How AI is used, and kept safe

Role-play and grading

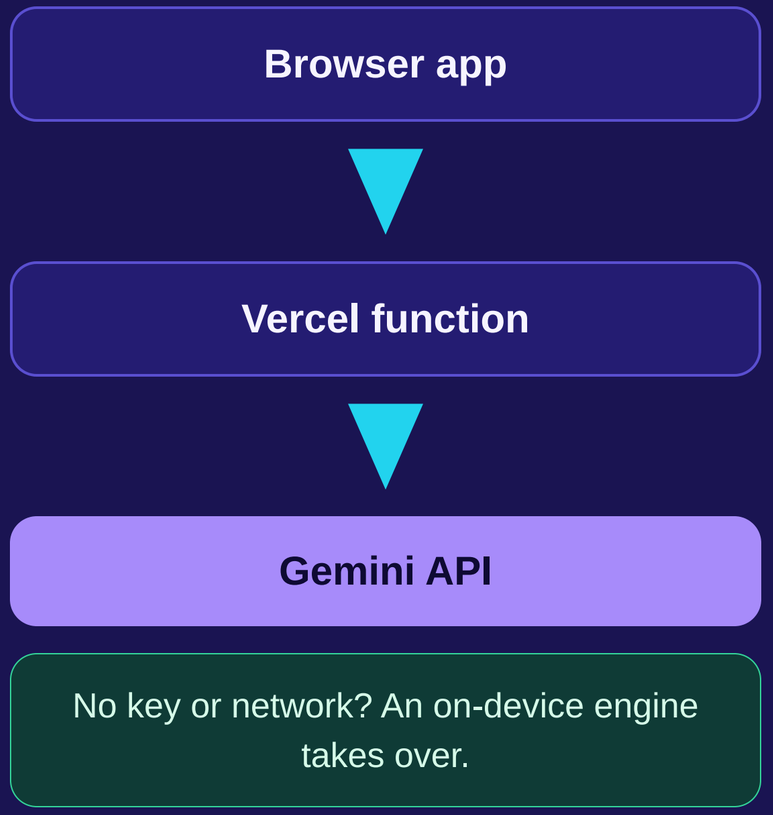

Gemini writes fresh scammer messages for five personas and judges each reply: safe, risky or fatal.

Message and screenshot analysis

A verdict, red flags and a safe reply to send back. It says when it is unsure.

Guard rails

The key stays on the server. Input is capped and rate-limited, output is validated JSON, and user text is treated as data.

Built with HTML, CSS, JavaScript, Gemini API, Vercel functions, Web Speech API, service worker (PWA)

Shahariar

AI developer · Founder of FutureTech.ai · Bangladesh

Individual entry. I design, build and ship AI apps on my own, with about 50 AI agents and apps built so far.

Why Scam Gym: people never get to practise resisting a scam before the real one arrives, so I built the place to practise.

Practice builds the habit. Next, make it shared.

Why it works

Learners face pressure safely and the coach explains every loss.

It works offline, in Bangla and English, on any phone.

Honest limits: educational, rule-based scanner, AI can be wrong.

What is next

A verified list of official domains and helplines.

Native-speaker review of Bangla and English copy.

Partnerships with banks and mobile financial services, and a larger scenario library.

Live app: scam-gym-blush.vercel.app

Code: github.com/shahriarsharif406/scam-gym · Demo video: see the Devpost page

Educational project. All characters, numbers and links in the simulations are fictional.
